

RAIL SAFETY DEVICES

TRAMP-ON

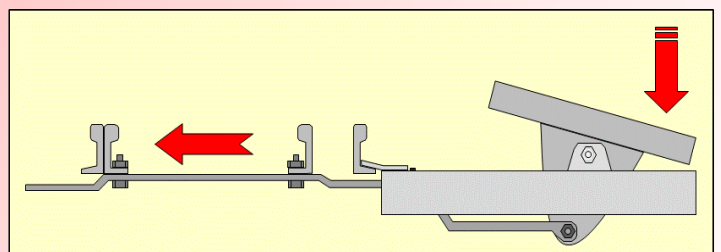

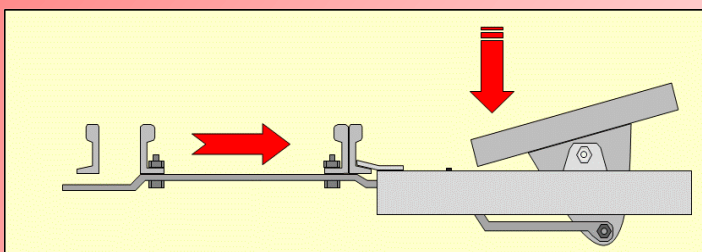

RAIL SWITCHING DEVICE

The switch point assembly ensures a simpler, SAFER and easier method of moving rail switch blades.

It consists of a Foot Operated device which activates a flat section of steel connected to the existing rail switch blade assembly.

A Locking Pin prevents accidental interference with the switching device.

SAFE & EFFORTLESS COMPLETE MOVEMENT OF RAIL SWITCH BLADES

EASY TO INSTALL - using only three bolts, fits onto existing rail switch assembly.

SAFE - the unique foot operation prevents hand & finger injuries, the locking pin prevents accidental interference with the switching device.

ROBUST CONSTRUCTION - suitable for underground conditions.
